MAYHEM JUNKYARD

PART 2

GARAGE AND OFFICE

A junkyard is a business and every business needs an office... even if it is a little shabby.

With several walls to choose from, you can create seperate offices and garages or connected ones with equal ease.
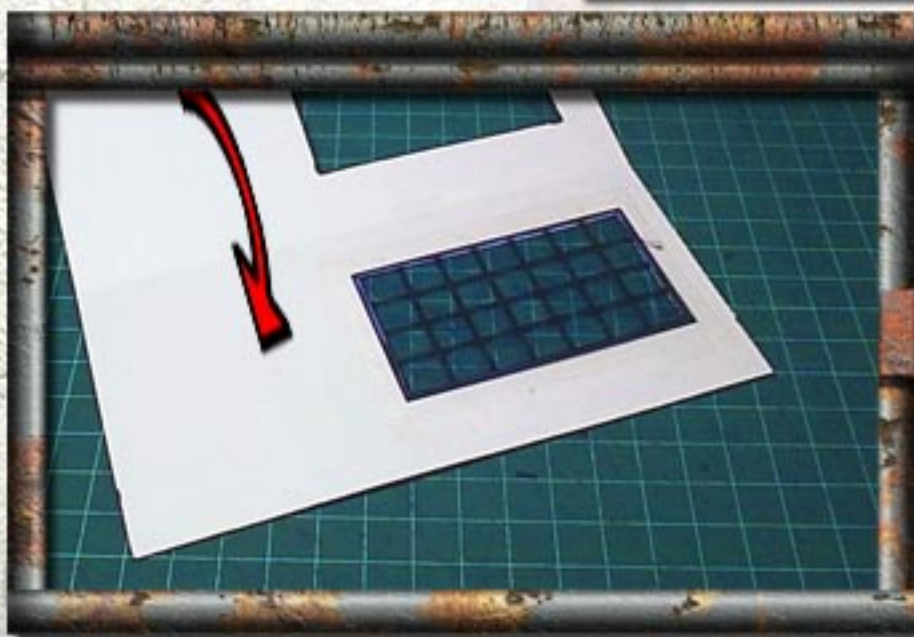

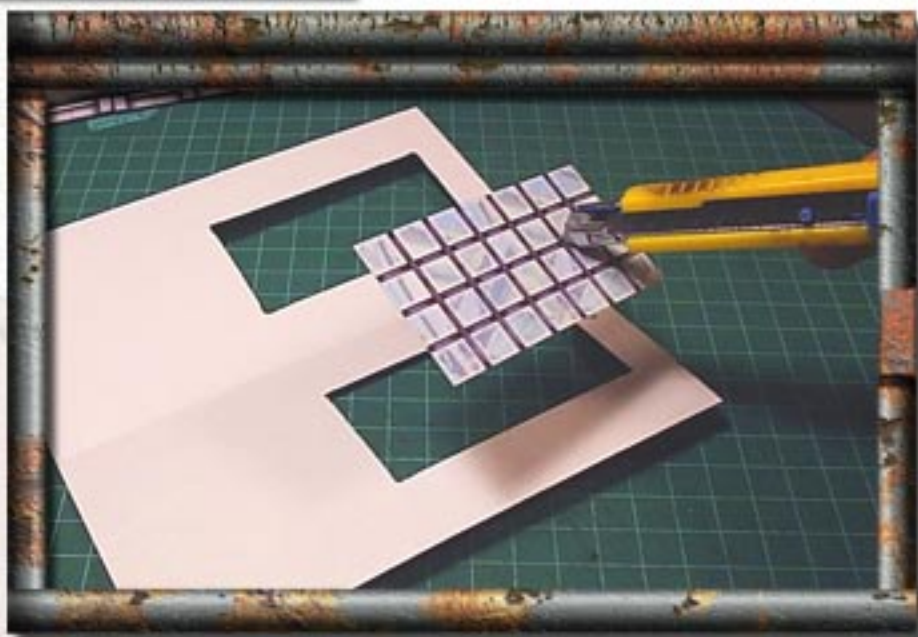

www.worldworksgames.com

The walls of the garage are simple fold overs. Score, cut out and edge each one prior to assembly.

Apply a thin layer of glue to the inner surface of the wall and fold it over, burnishing (rubbing firmly) across it's surface. Double-sided tape is a good alternative here, as it is less likely to produce warping.

Learn all about edging and other top tips in the tutorials section at www.worldworksgames.com!

If you plan to use the provided transparencies to replace the windows, carefully cut out the window panes before gluing.

Cut out the GLASS AREA ONLY. Leave the black inner frame in place and re-edge it where needed.

Attach the transparency using ordinary clear office tape.

Once the transparency is in place, glue or tape the wall and fold it closed.
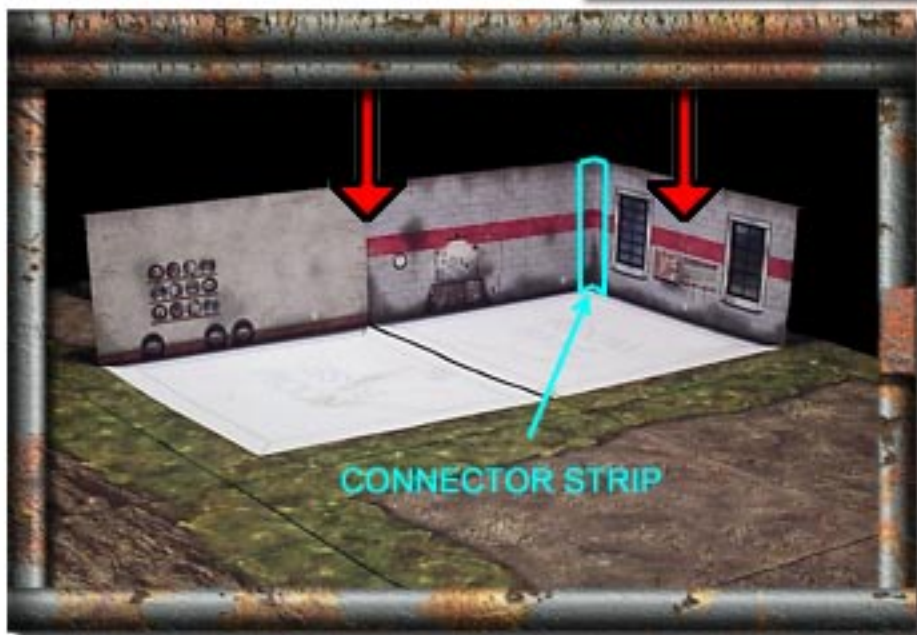

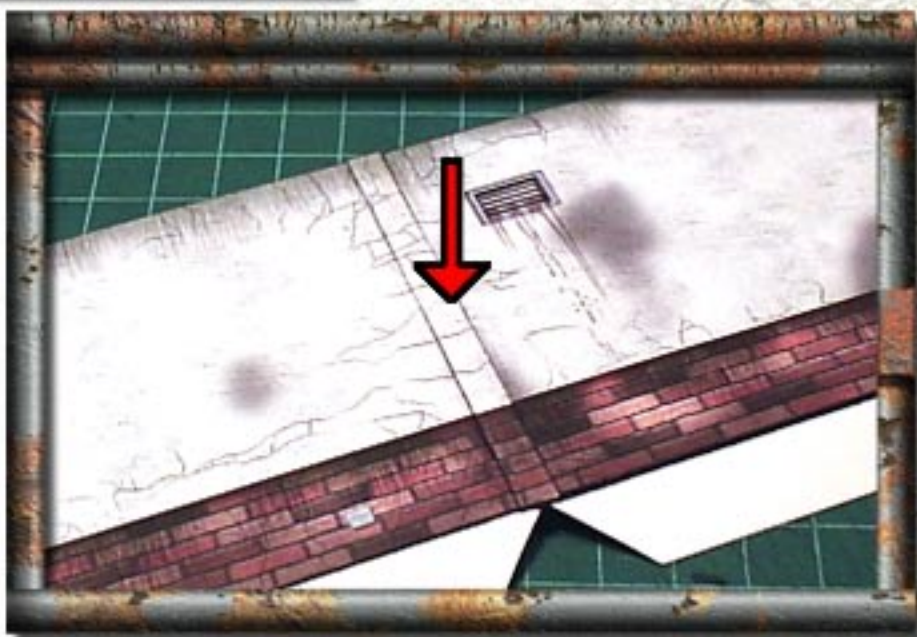

www.worldworksgames.com

If you wish to have the garage door or other doors act functionally, score along the hinged side and carefully cut along the sides without hinges.

Re-edge the door and it's frame.

If your set up has two or more connected walls, they should be linked at this stage by gluing one of the textured connector strips along the outside seam as shown.

CONNECTOR STRIP

Once your individual walls are done, glue each in turn to the perimeter of the room template on your groundtiles.

Once they have been glued in place, attach an inner and outer connector strip to each CORNER.
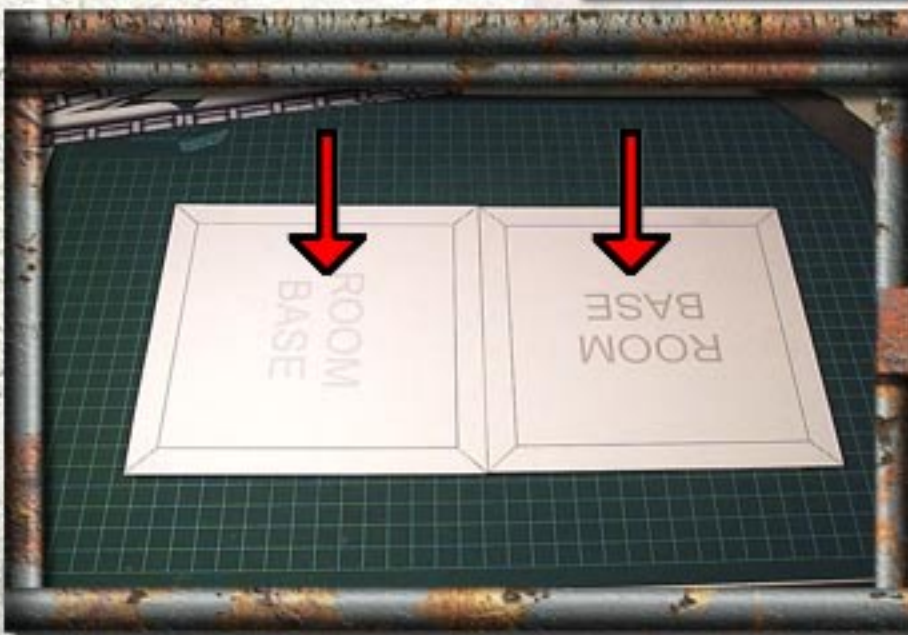

Test fit any internal walls your structure has and trim them if needed.

Once properly fitted, glue down the internal walls and add any needed connector strips where it meets the existing walls.

Test fit the floors to ensure a good fit and trim them if necessary.

Glue the floors into place as shown.

Finally we come to the roof.

First, print off as many room templates as you need and glue them to a piece of foamcore exactly as you did for the groundtiles.
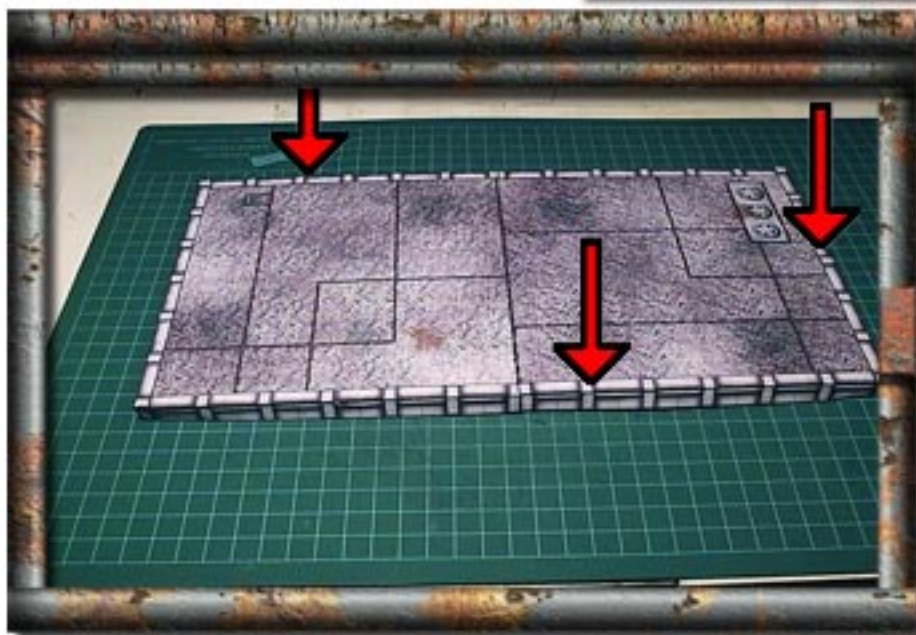

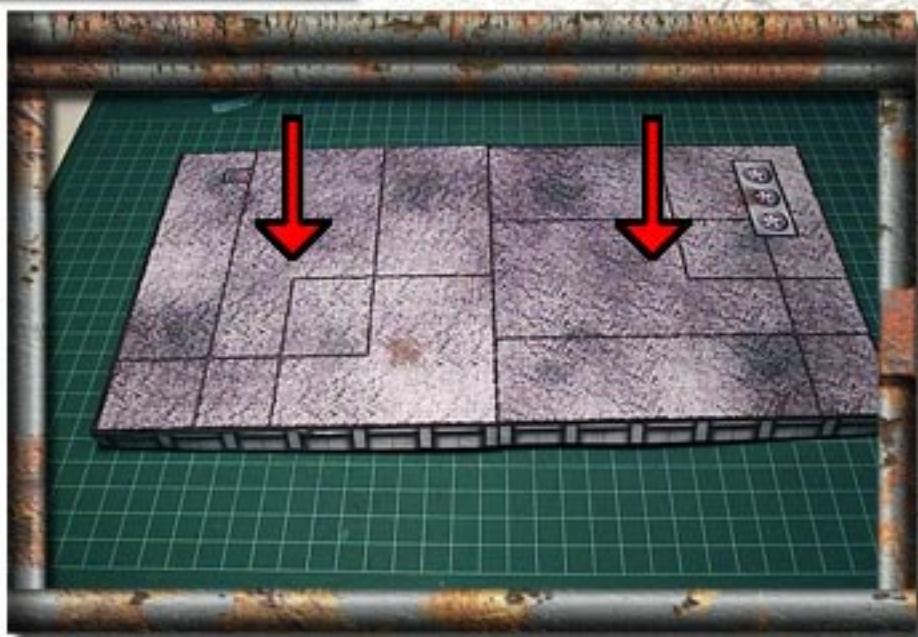

www.worldworksgames.com

Glue the roofliners to the perimeter of the roof template as shown.

Once dry, glue the roof segments of your choice down over the templates and roofliners.

Finally, glue the thin strips of stone decor to the lip of the roof.
