

PART 1

BASING AND GROUNDTILES

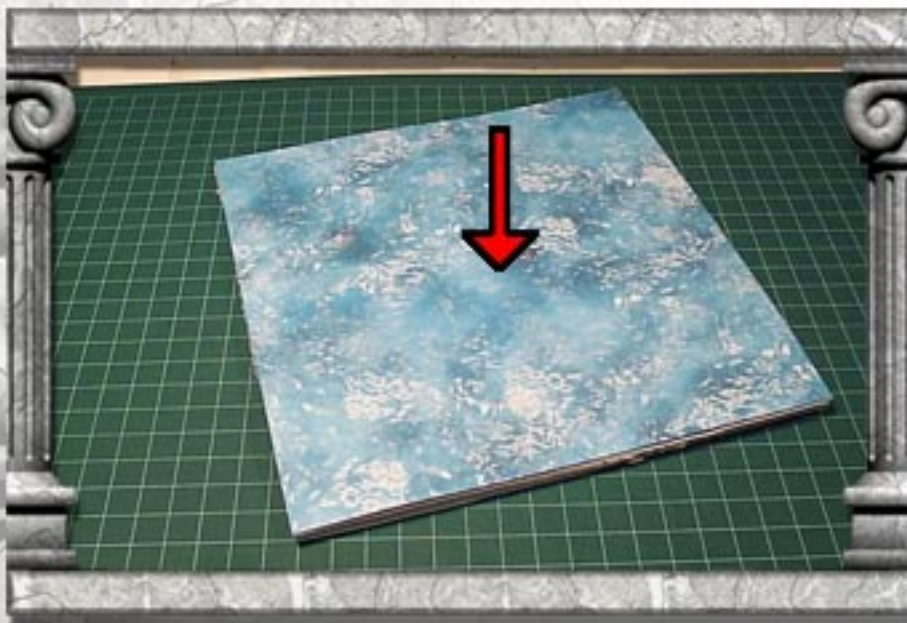

Base tiles are the literal foundation of your model. With them you can create a sprawling beach-front property quickly and simply.

All ground tiles are provided in three formats: gridless (7"x7"), 1" squares (7"x7") and 1.5" squares (7.5"x7.5").

This set also includes three bonus "blended" tiles which will allow owners of Exteriorworks: Hinterland to transition to Seaworks: Atlantis with ease.

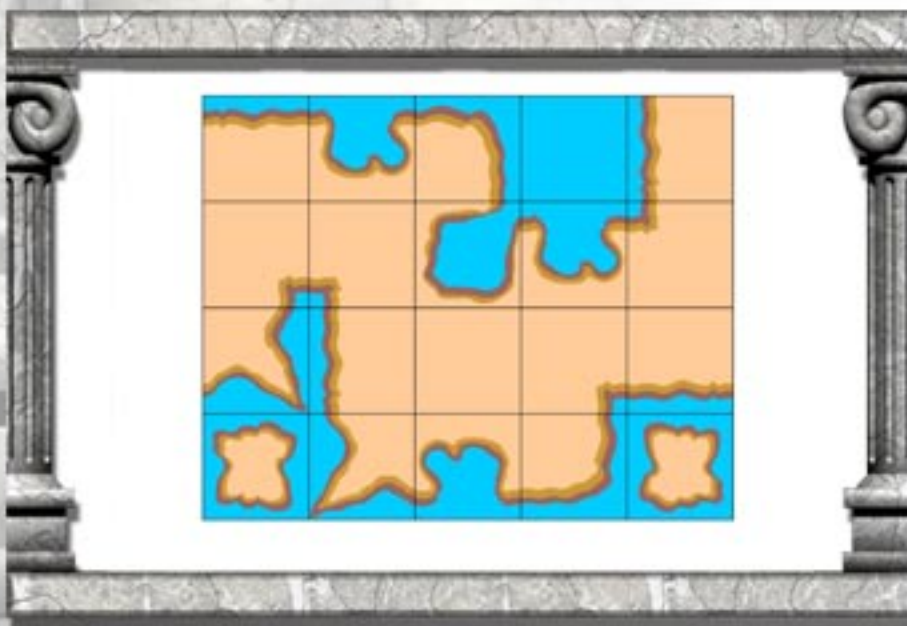

There are several ways in which you can create your ground tiles.

The first and simplest is to just cut out the tile, edge it, glue it to a piece of foamcore and cut it out. Easy!

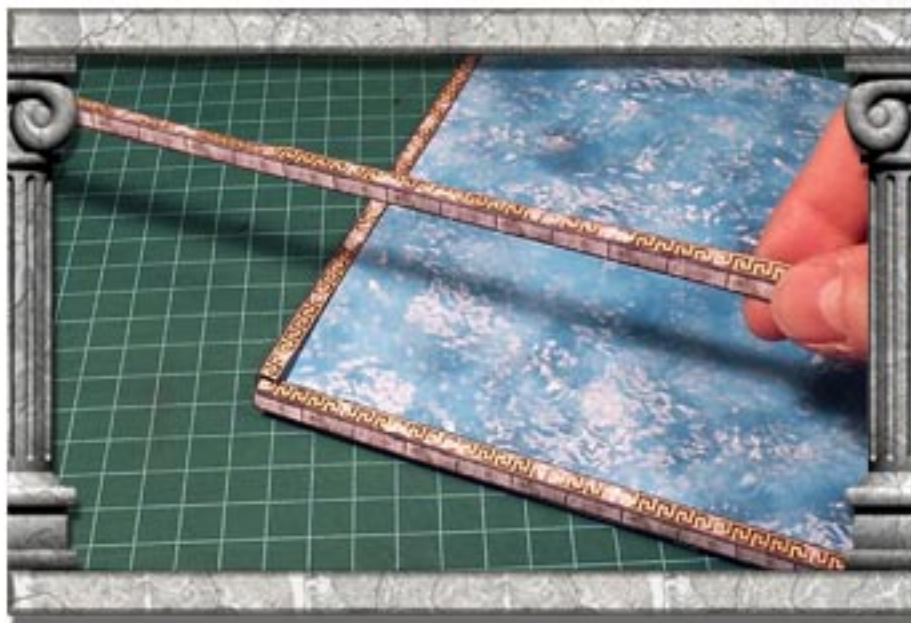

Learn all about edging and other top tips in the tutorials section at www.worldworksgames.com

The second method is to glue several tiles directly to a sheet (or several sheets) of foamcore to create a "masterboard".

If you decide to go the "masterboard" route, you may want to take a moment to plan it out either on a computer or with a simple sketch to help you keep track of which tiles you need to print.

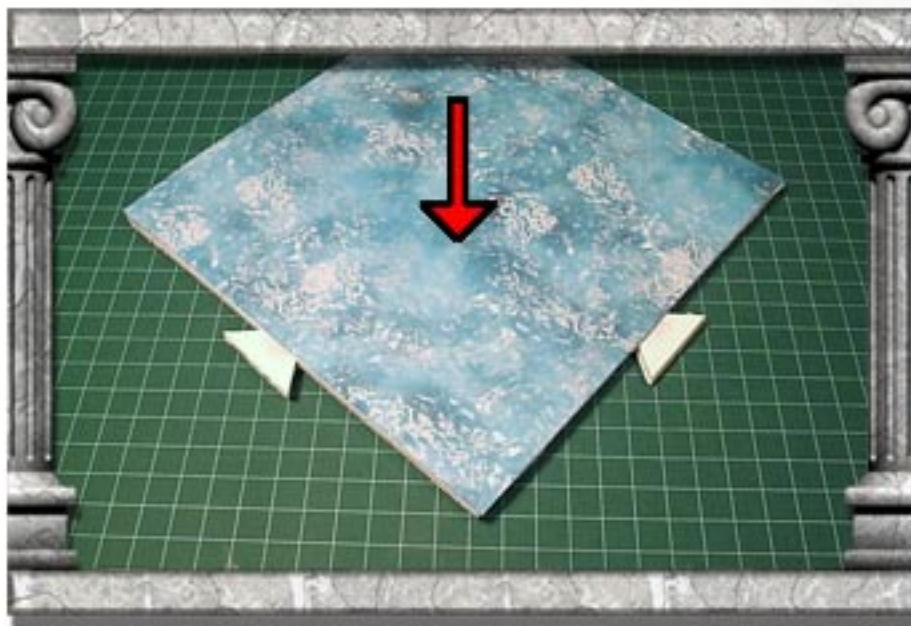

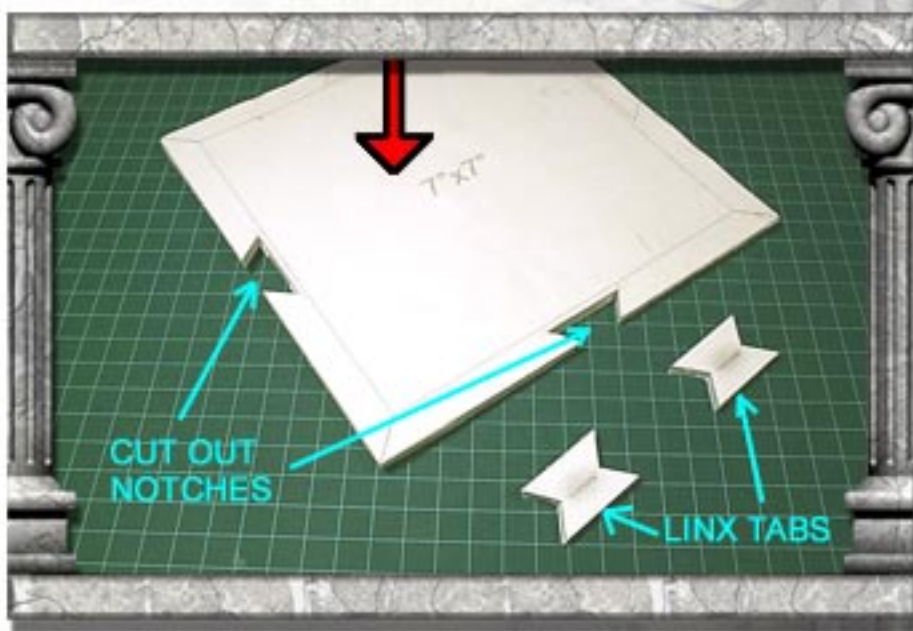

You can neaten the edges of your "masterboard" with the decorative strips provided, giving it a more finished look.

The last method is to use the Paperlinx system.

Glue the appropriate scale template to a piece of foamcore and cut it out along with the linx tabs provided.

Carefully cut out the slanted notches along the sides of the template as shown.

Now simply glue the tile over the template.

Once dry, the tabs are inserted (BUT NOT GLUED) into the notches from below, creating a completely flexible linking system.
