

PART 5

GIANT SQUID

The waters surrounding Atlantis are filled with deadly creatures but the most feared of all is the voracious Giant Squid!

Begin with the simple tentacles.

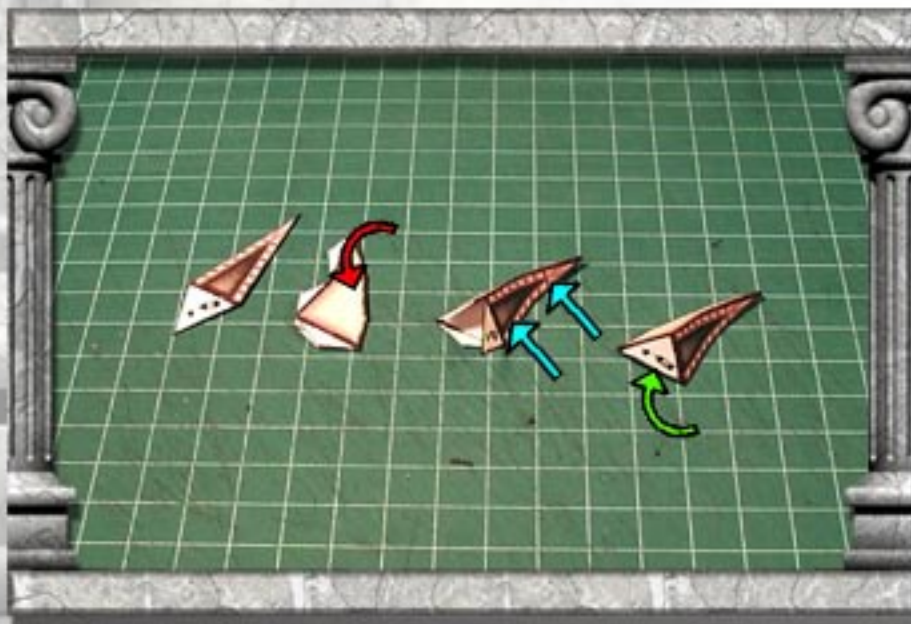

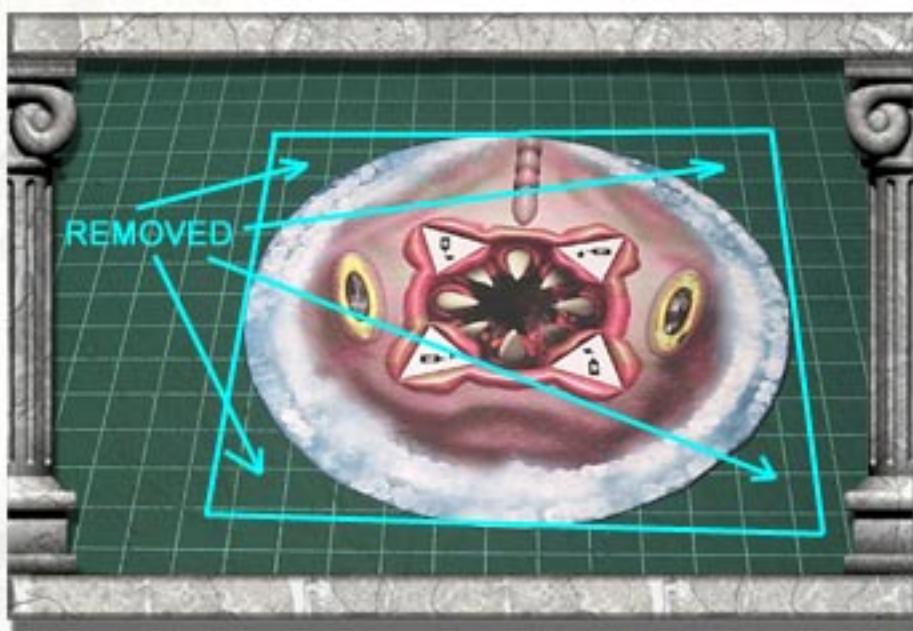

Apply glue to the inner surface and burnish (rub firmly) across it to spread the glue evenly, taking care not to accidentally glue the bottom flaps together.

When dry, trim off the excess cardstock and glue the bottom flaps into place as shown.

The face of the squid is also a simple fold-over and should be glued and burnished as before.

On the underside of the face and base of the simple tentacles is a rounded template. Trim this off to create a more pleasing shape. Edge the completed shapes with an appropriate colour.

Learn all about edging and other top tips in the tutorials section at www.worldworksgames.com

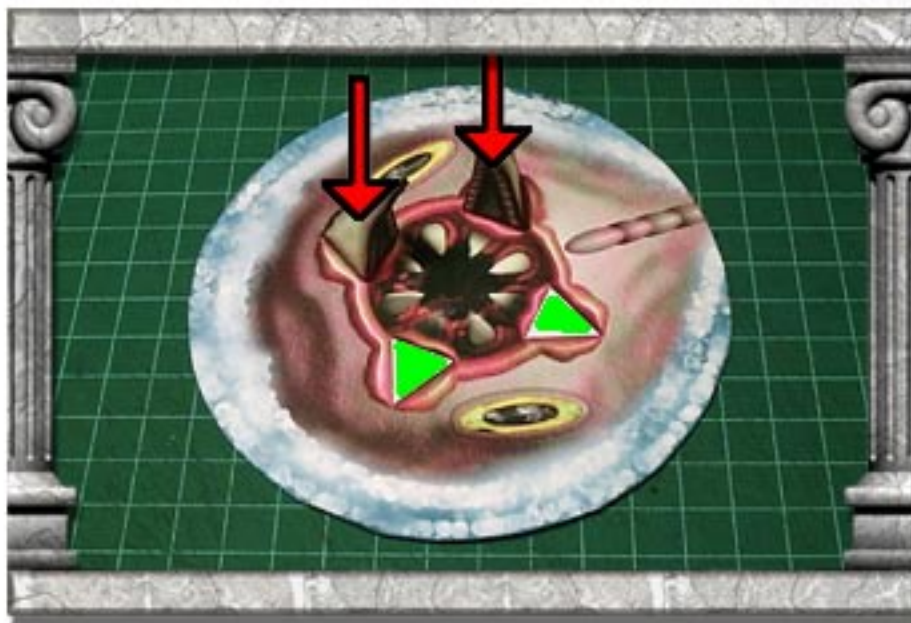

The teeth go together fairly simply.

First, glue the backs of the teeth together.

When dry, attach the inner surface of each tooth as shown.

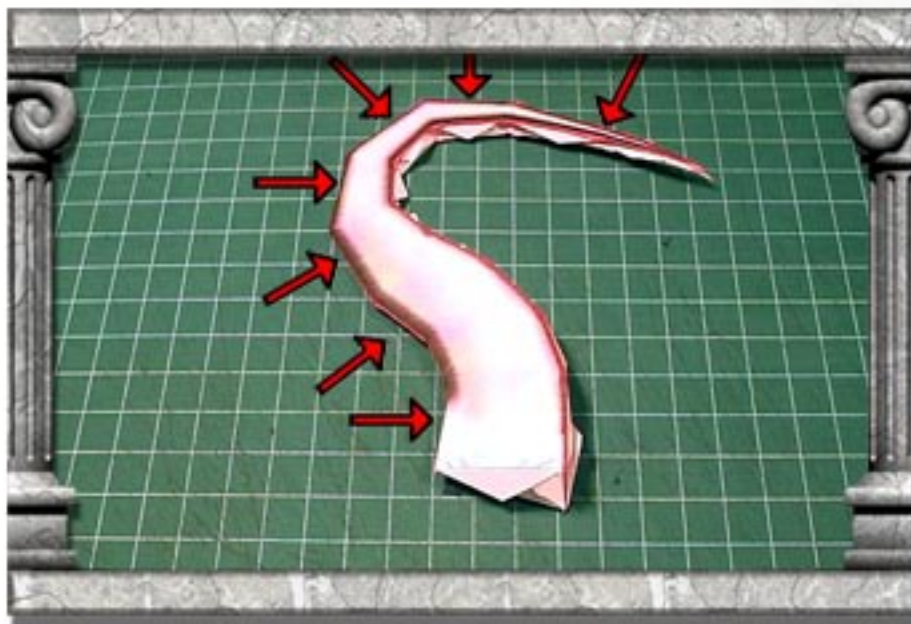

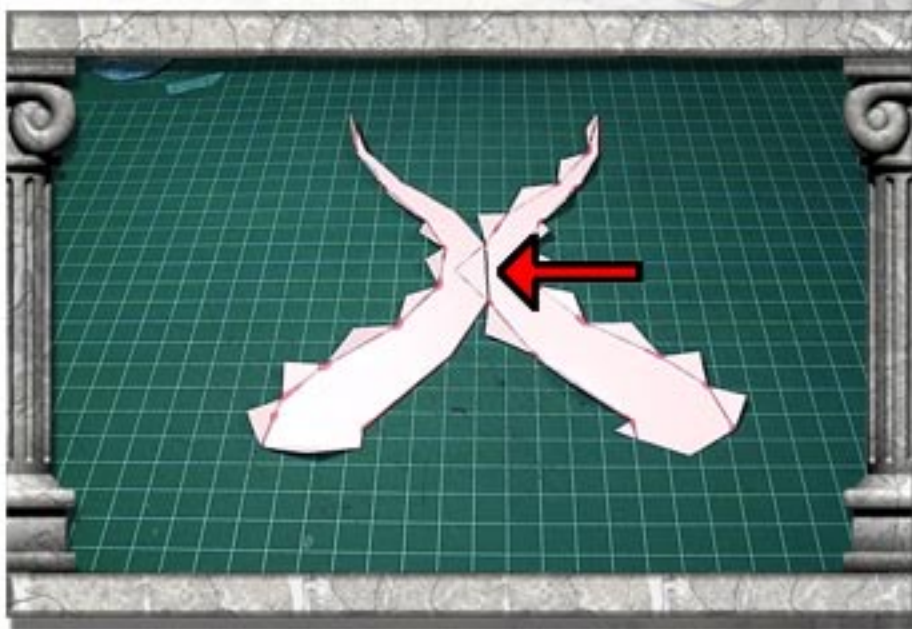

Finally glue up the bottom flap.

Glue the finished teeth to the designated gluing areas on the face as shown.

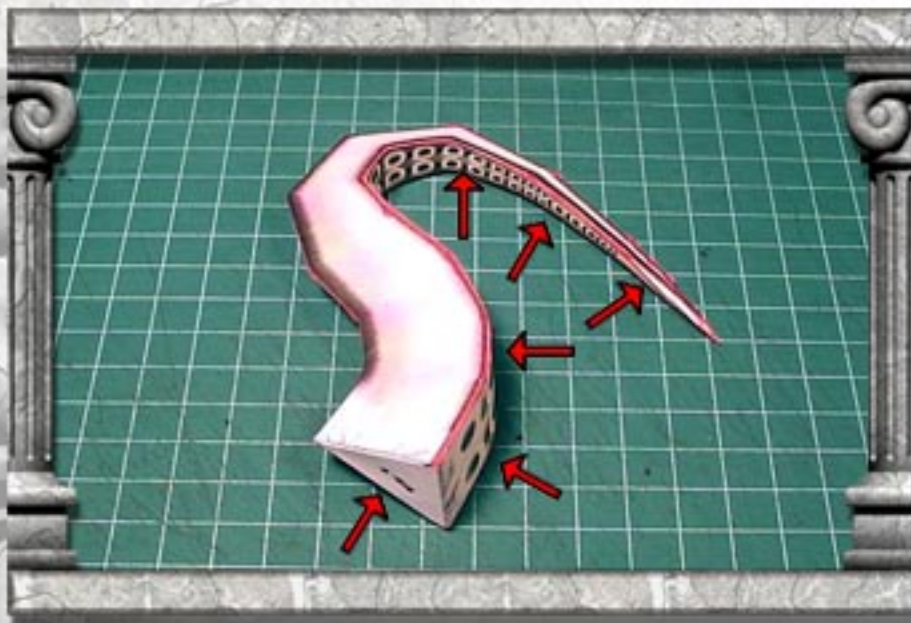

The complex tentacles are quite tricky and thus not recommended for novice builders.

Begin by attaching one of the main back tabs to the opposite point on the other side of the tentacle.

Next, apply a drop of glue to each of the remaining tabs along the back of the tentacle and fold it over as shown.

DO NOT ATTEMPT to glue the suckers on all in one go!

Attach the suckers a little at a time. Be sure to align them properly to the bottom flap and allow each set of tabs to dry before moving on.

These are quite fiddly and will require patience, both hands and tweezers in order to assemble them correctly.

When finished, glue to the bases provided which are assembled as per the face.
